BRYSTON BP-19 PREAMP

James,

Wolfsong Audio's BP-19 Analog Preamp demo unit arrived last afternoon. We swapped it directly for our long time reference Bryston BP-26 with the MPS 2. No other changes were made in the system.

The results are mind blowing! While the BP 26/MPS 2 combination has always impressed with its "doing nothing to the signal" approach the new BP-19 is simply better in all aspects. Lower noise floor, deeper and wider soundstage, harmonic decay that sounds real, bass depth and attack are greatly improved and the DALI Rubicon 8 speakers have never sounded this good with ANY gear we have.

With just a few hours on it the BP-19 is easily the best analog preamp I have ever heard under \$15,000.00 and is better than some at \$20,000.

The Bryston BR-19 is a success in all aspects.

From the sound to the cosmetic layout and remote design it is simply a winner.
