## MY BRYSTON BP-19 ANALOG PREAMP

My Bryston BP-19 is home and all set up.

This unit is replacing my BP-25 that I had purchased in 1998. She goes a long way. It has been a great preamp and to the next owner she will shine.

Now to the BP-19.

I have been listening to music and various genres for about 8 hours now. This new preamp has all what the BP-25 had but after that she offers a lot more. I did not lose any off the low end I loved with the old pre amp I have also gained that punch I love that was not quit there before.

**The huge difference is that this new unit has a lot more to offer in the mids and highs and all in a good way. It's not bright at all on my system, the music is so alive now, all is well balanced to my ears. The soundstage is perfect.**

Bryston never fails to amaze me. I did not think that a pre amp would change the sound that much but it sure does. It's like having a brand-new stereo all over again.

Thanks Mark Jones for making this happen and to the team at Bryston for building my unit for me, especially Mr. Blair Crowley.
